

Fireplace Tile Surrounds

A bespoke collection of porcelain and natural stone tiles to enhance and complement your Stovax or Gazco fireplace.

Exclusive Fireplace Tile Surrounds

We understand that the space in which you live is an expression of your individual style, with the fireplace forming the very heart of your home. It is a focal point that not only extends the warmest of welcomes to your family and friends, around which they will gather naturally, but it also offers you the opportunity to make a design statement that defines the room even when the fire is not lit.

Many of today's contemporary fires, whether gas-fired or woodburning, are designed to fit into an existing chimney

breast or a specially built studwork structure. The wall you have chosen for your new fire can also become a design feature to complement and enhance your fireplace.

This brochure shows how our unique collection of 35 porcelain and natural stone tiles have been hand-picked to complement the wide range of Stovax and Gazco fireplaces and help you create your ultimate look for your interior space.

How to order your Fireplace Tile Surround Package

Ordering your Fireplace Tile Surround Package couldn't be easier. Once you have decided which tiles you would like to complement your new fireplace simply advise your local retailer who will do the rest for you.

To ensure maximum durability and life-long enjoyment from your purchase, it is advisable to use a professional tiler experienced in fitting natural stone tiles (your retailer will be able to recommend reputable tradesmen). Once installed you can sit back and delight in the new centrepiece of your home.

To find your local retailer simply visit www.stovax.com.

* Nominal dimensions subject to a tolerance of +/- 2.5mm within internationally accepted standards. Burnt Sienna depth can vary between 1cm and 1.5cm.

When calculating tile quantities, do not forget to make an allowance for cutting and wastage.

Tiles are only sold in box quantities which cannot be split.

Please note: we would always recommend seeing a sample before ordering.

Important Additional Information

Natural stone tiles

Stone tiles such as granite and slate are natural materials which have inherent variations in colour, marks and surface textures and this is most often considered an advantage from an aesthetic point of view. However, it does mean that you cannot assume a single sample tile will give you an accurate indication of a larger area. Due to their natural origins, some of the tiles may have minor chips or blemishes. Such relatively insignificant imperfections should be considered normal and not the result of poor workmanship. We also strongly recommend that you use a professional installer/fixer who is experienced in fitting natural stone.

Porcelain tiles

Shade variation is an inherent feature of the manufacturing process.

Shading

We recommend that natural stone and porcelain tiles are loosely laid out and 'blended' prior to fixing to achieve the most pleasing distribution of shades. Differences between batches can be more marked, for this reason we recommend that you buy all the tiles at one time. No liability for shading issues can be accepted after installation.

Sealing

It is strongly advisable to seal natural stone and unglazed porcelain tiles before commencing installation. This protects the tiles from excessive adhesive or grout staining during the installation process, and also protects the tiles from staining in the future. Always apply the sealer / impregnator in line with the manufacturer's guidelines.

Adhesives and grouts

Always use high quality adhesives and grouts following manufacturers' recommendations for their use and suitability for the type of tile, the application and the substrate being tiled.

Cleaning

Please note, the use of certain acid-based cleaning products may cause natural stone and porcelains to react and change character.

Photography

Owing to variations in studio lighting and printing inks, the tile colours shown in this brochure may differ slightly from those of the actual tiles.

Limits of Liability

Stovax and Gazco accept no liability for the faulty installation of its products. In the case of any claim relating to the tiles themselves, Stovax and Gazco's liability, to the extent permitted by law, is limited to either the replacement of the product or a refund of the cost of the product, and does not extend to cover any consequential loss. Claims must be reported within seven working days from receipt of the tiles. Tiles must be inspected prior to installation and claims cannot be considered after the tiles have been installed.

Please be advised that installation constitutes acceptance of the quality, size, colour, texture and shade of the tiles. Stovax and Gazco warrants that its tiles conform to their description and are fit for their purpose. Stovax and Gazco makes no other express or implied warranty as to fitness or suitability of the products for particular installations. We extend no guarantees, express or implied, as to wear resistance or maintenance procedures.

Product Improvement

Stovax and Gazco pursue a policy of constant product improvement. Products may therefore differ in specification from those illustrated and described in this brochure.

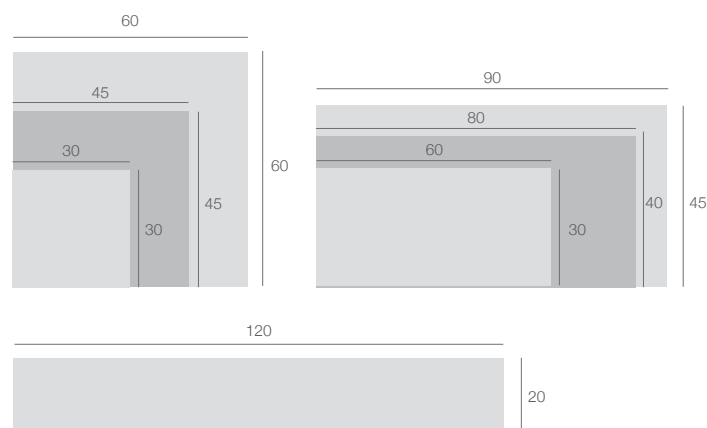

How to calculate the number of tiles you will need

To calculate the number of tiles required, first decide which size you would like. Then, simply measure the height of the area to be tiled and multiply by the width. In most cases the shape of the area to be tiled will be a simple square or rectangle so you can simply calculate the area of each tile and divide it into the area to be tiled. This assumes that the area being tiled is square at the edges, if not you will need to allow some extra for part tiles.

Otherwise, the easiest method is to make a scale drawing of the area on a piece of graph paper, draw the outline of each tile (including dados, trims and borders where appropriate) and add them up. We recommend that you allow for part tiles and wastage by adding at least 10 percent to the total. It can be a false economy to only order the exact quantity. You may break some tiles when cutting or you may end up with awkward shapes that take more tiles than anticipated. There is nothing worse than getting near the end of the job only to find that you are short of one or two tiles, especially as colours can vary between different batches.

If you have any problems calculating the number of tiles required, or would like some advise please contact our customer services team who will be more than happy to help.

Size guides* (All sizes in cm)

* These diagrams have been provided for a general size comparison only. For specific dimensions please refer to the table on page 18.
